

Temperature Measurement, Non-Contact, Infra-Red Sensor Calibration

Radir Covid-19 Update as at Wednesday 25th March 2020.

Our office and workshop are still open for business (albeit with reduced staff) and our other staff are able to work from home (and are doing so).

If your production is shut or running at reduced capacity, now could be a good opportunity to consider having your equipment calibrated. Our workshop can calibrate almost all types of infra-red temperature measuring tools from most manufacturers.

As our office and workshop are manned, given that the Government permits, we are still able to take delivery and arrange the despatch of goods (we are still receiving deliveries from our suppliers). We will also use cleanser on the unit and packing.

If you want us to calibrate your pyrometers, call us on 01908 370000 or email us on cal@radir.com, we will need to know what the equipment is and its make and model, also what temperatures you want us to calibrate at – we normally do 3 temperatures to encompass the lower, middle and upper temperature range of your process, but we can do more (or less) if that is what you want, just let us know.
