

New Infra-Red Pyrometers:-

Non-Contact IR Temperature measurement sensors from Fluke Process Instruments (Raytek/Ircon):

T4.0 goes Short-wave.

- T4.0 goes Plastic.
- T4.0 goes Glass.
- T4.0 goes Metal.

These new, industry specific sensors have:

Special Spectral Responses (Wavelength Bands).

- *Analogue mA and data comms output.*
- *Free Software and Support.*
- You need narrow band "specials" for special applications.
- We optimise these features for your application from -50 to 3200°C.

Call to discuss our miniature or high spec. systems.

IR Sensors/Thermometers, Thermal Cameras and imaging systems.

Covid/Brexit Update.

We have been open for all of our services throughout the pandemic and continue to do so, our office and phone systems are all manned to give you the service you expect.

We are operating a staffing rota plan to ensure we can maintain social distancing in the office, and we are all engaged in procedures to prevent/reduce infection by using safe working practises like sanitising, masks and isolation, where necessary.

We continue to receive uninterrupted supplies from our European (and worldwide) partners and have no reason to think that this will change in the foreseeable future.
