

## Scan for temperature - without contact:

Infra-red is commonly used in the paper industry for the following applications:

- Paper pulp processing.
- Paper Drying.
- Cardboard production.
- Extrusion coating and laminating.

Linescanners are extremely useful in monitoring the paper processes by recording data, measuring temperatures to ensure quality, avoid product contamination and provides alarms if needed. The benefits to the customer are that they save money, time and have a product that is made to same high standard everytime. [Click here to view PDF brochure of this product](#)

### Product Highlight

---

Thermalert T4.0 spot pyrometer:

The T4.0 Thermalert is a smart integrated sensor designed for accurate temperature measurement with best in class performance for factory automation needs

Available as plug & play into any type of environmental situation

- Sensors are rugged, small and easy to install. • Laser sighting available for all instruments
- Backward compatibility to old Raytek® and Ircon® in class sensors and accessories
- Broad range of accessories available (high temperature enclosures, cables,...)
- 2-year warranty

Thermalert 4.0 with 12 pin connector supporting comprehensive input/output capabilities

Thermalert 4.0 supports 2 wire loop for simultaneous power supply and analog output

Thermalert 4.0 with 6 pin terminal providing analog out and RS-485 communications
