

Your NEW Datapaq Distributor

We are pleased to announce that Radir have just become the exclusive distributor for Datapaq in the UK, Ireland and the Middle East. Datapaq are the world leaders in temperature profiling solutions, supplying data loggers, barriers and thermocouples worldwide.

What is Temperature Profiling?

Temperature profiling is the term used to describe the process of recording and interpreting the temperatures of products and/or air through a conveyerised heat-treating process in ovens, furnaces. Temperature data is measured continuously using thermocouples connected directly to the product(s) at different locations as it travels through the oven or furnace.

So do you need to optimise your oven heat cycle, do you have an application that needs temperature profiling or would just like to know more about Datapaq? If so please click button below or contact us at datapaq@radir.com or by telephone 01908 370000.
